**Subject: Letter of Appreciation**

3I Electromechanical Company has been part of the project team for construction of Ethiopian Airlines Maintenance hangar. The project includes fabrication and erection of free standing 3m box arch truss spanning 84.5m & 25.5m high and 26m high door pocket steel structure.

3I ELECTROMECHANICAL company has been involved for the production and fabrication of some of the free standing arch's and the door pocket structure on both production and fabrication with good quality of work and proper supervision.

We appreciate 3I ELECTROMECHANICAL for the determination they put for the success of the project and the keenness they show throughout all phases of the project.

Sincerely Yours

Eng. Pier Paolo Elmi,  
General Manager
